We show that a single-mode superposition of nearly degenerate eigenmodes of localized light can be used to form a quantum mechanical field. Moreover, such a superposition can be realized with a single spatial mode of light, which automatically selects out the particular eigenmode from the superposition without the need for quantum process engineering. This technique can also be applied to create both degenerate and nondegenerate modes of light.[Clinical pharmacokinetics of cefodizime in hospitalized patients]. Clinical pharmacokinetics of cefodizime (CDZM) was investigated in 34 patients. Each patient received 1 g intravenous infusion of CDZM. After the dosing, the serum concentration of CDZM was measured by HPLC. The serum half-life ($T_{1/2}$ beta) of CDZM was 1.88 hours, the volume of distribution at steady-state (Vd) was 2.76 L/kg, the apparent volume of distribution at steady-state (Vss) was 0.60 L/kg, the metabolic a1d647c40b
