Dream Theater - Live at Budokan (DVD) - \$22.99 ebay.com.au. Buy New. Surgical treatment of penetrating thoracic wounds. Forty-four penetrating wounds of the thorax were reviewed. According to thoracic injury pattern, 24 linear (fracture through a rib), 18 lacerations of the anterior and posterior chest wall, and one laceration of the left brachiocephalic vein were found. The assessment of chest wall penetration was subjective and compared with an exactly identical clinical and radiological examination. This method is reliable because it accounts for soft-tissue injuries. Treatment was exclusively surgical and based on a combination of early radical debridement, carinal or tracheal resection, and appropriate airway reconstruction, whenever present. Lymph node dissection was not standardized. The mortality rate for this penetrating thoracic injury was 14.5%.1. Field of the Invention The present invention relates to an image capture apparatus and an image processing method, and is directed to, for example, an image capture apparatus for capturing an image of an object and an image processing method therefor. 2. Description of the Related Art As image capture apparatuses for capturing an image of an object such as a person, surveillance cameras, and the like, camera modules are increasingly incorporated in cell phones and tablets. An image capture apparatus may incorporate various optical functions such as a blur preventing function for preventing an object from being blurred, a focus preventing function for preventing a background from being out of focus and a picture from being blurred, and so on. These optical functions are achieved by optically processing an object image. FIGS. 1A to 1C are
