11, 2001. As a result of the company's acquisition of Civil 3D, Autocad 4 introduced a more concise command structure, which, while retaining the typical AutoCAD command structure, was more easily learned by users. It also introduced basic 3D functionality. Autocad 4R2 was announced on September 6, 2003 and was released on September 29, 2003, incorporating Autocad 2000 compatibility. Autocad 4R2 contained over 65 new features and improvements. For example, the "Explode" command was changed to a "Split" command. This change was made so that the Explode command now enabled users to find the original object with the most segments, instead of splitting it into smaller objects. Autocad 5 was announced on January 10, 2004 and was released on September 30, 2004. It contained over 300 new features and improvements. For Windows systems, Autocad 5 introduced the ability to work in 16-bit Windows colors. This allowed users to have a much more accurate representation of colors in the document. This also enabled users to see what colors and edges will look like when a tool or object is applied. Autocad 2007 was announced on April 29, 2006 and was released on August 17, 2006. It was a significant update to Autocad 5 and introduced numerous features, including new capabilities for DWG, version control, files and projects. For example, it was possible to open an existing AutoCAD project directly from an Excel spreadsheet. On October 1, 2008, Autodesk released a series of Autocad cloud-based web apps.
