Помогите разобраться почему когда пытаюсь запускать скрипт на сервере что-то не происходит, и только при запуске из пользователя или при запуске через браузер, все работает? При запуске через notepad++ или так иное подразделение, все хорошо работает. `$("#button").on("click",function(){ $("#img").attr("src",$image_url); $("#title").text($title); $("#text").text($description); var xhttp = new XMLHttpRequest(); xhttp.onreadystatechange = function() { if (this.readyState == 4 && this.status == 200) { document.getElementById("container").innerHTML = this.responseText; } }; xhttp.open("GET",$text_url); xhttp.send(); })` A: Вы пытаетесь подставить произвольный объект в метод для загрузки файлов в  0cc13bf012

A: The default delimiter is space, so use `str_getcsv()` and change the value of 'delimiter' parameter to" (space character): Imaging findings of the spine in patients with rheumatic diseases. Spinal abnormalities are often the source of unrelenting pain in patients with rheumatic diseases. Current imaging modalities to detect and document the presence, size, and activity of spinal lesions include plain radiography, contrast radiography, computed tomography, computed tomography-guided (CT-guided) fine-needle aspiration, magnetic resonance (MR) imaging, and bone scintigraphy. Plain radiography is the most commonly employed imaging modality to detect spinal lesions in patients with rheumatologic conditions. The major advantage of plain radiography is that is inexpensive and readily available, but its diagnostic accuracy is limited by multiple factors, including anatomic distortion and superimposed bony changes. It is also technically difficult to perform in patients with severe disease and limited range of motion. The accuracy of plain radiography is significantly improved by the addition of metrizamide, opacification by water, or contrast medium. Computed tomography (CT) is more sensitive in the detection of soft-tissue changes and is the best imaging modality for the diagnosis and exclusion of fractures. However, artifacts from adjacent soft tissues as well as complex positioning and radiation-related hazard
